PLASTIC WASTE

Over the next few weeks Priory Pilots will be looking at the devastating effects that plastic waste is

having on our environment. Researching for the program I found some disturbing facts about how plastic is polluting our land and oceans killing animals, fish and birds. Did you know that it takes around 1000 years for just one piece of plastic to break down in land fill or our oceans? But plastic never goes completely it only breaks down into tiny particles that contaminate our soil, rivers and oceans for ever. We are slowly destroying the world with all of the waste we produce. But it was never meant to be like this. When God created the world everything that He created was good and right at the beginning of the bible in Genesis chapter 1 we can read the story of creation and how pleased God was with what He had created. Then in chapter two we can read how God created man and put him in charge, giving us the job of tending and keeping His creation.

The Hebrew word for 'tend' and 'keep' is 'Shamar' and it means much more than our English of looking after something. It means to guard, to watch and protect. In other words God created man to be stewards of His creation. Stewards that will one day have to give account to our creator, God, on the job we have done to help guard, watch and protect His world.

We haven't made a very good job so far but there are things that we can all do to play our part in turning the tide on the worlds mounting waste problem. We can reduce the amount of waste we produce by only buying what we need and reusing things so we don't throw as much waste away. We can also recycle our waste so that it can be used to make new things that can be sold again. As God's stewards we need to play our part in reducing the amount of waste that is slowly killing His world.
